

Improving

Stem

Education Across European Schools

WELCOME TO THE FIRST STEM NEWSLETTER!

We will introduce you to the goals of our project, its partnership and the many useful resources that we are going to develop!

OUR GOALS

Various researches have shown how STEM subjects are not always among the most appreciated by the European Students, leading to underwhelming results. We think, however, that they will be of extreme importance, in the near future, for the European economy and labour market.

This is why we have decided to promote a **Europe-wide collaboration** to transfer and develop innovative STEM teaching methods based also on the use of **ICT tools**.

WHO WE ARE

Our partnership is made of organisations from UK, Italy, Greece, Netherlands, Romania and Turkey. We have competences going from teaching and research to e-learning resources development and promotion of innovation and entrepreneurship.

STEM SUBJECTS can be fun and engaging

The resources we are going to develop will prove it!

Teachers of STEM subjects will be provided with:

- Digital classroom-ready learning materials
- e-Learning courses about how to make STEM
- subjects engaging
- A Mentoring Scheme to develop awareness of the possible careers in STEM

These resources will be based on the findings of the research conducted by the partnership of the project! We wanted to be sure of really understanding the needs of STEM teachers. You can find both our State of the Art analysis and the various STEM resources on our website: <https://improving-stem-education.eu/>

OUR NEXT STEPS

We will soon publish our lesson plans for STEM Teachers, available digitally in all languages, and we are starting developing our e-learning platform. So...
STAY TUNED!
